Industrial applicability (IA)

PCT/EP2004/002512

For an assessment of novelty and inventive step the following document is presently deemed to be relevant:

D1: US-A-4 550 559

1. Amendments (Art. 19 PCT)

The amendments made to the claims are allowable under Art. 19 PCT.

2. Novelty (Art. 33(2)PCT)

Fig 7 in D1 refers to a cable comprising a central strand and six outer strands around the central strand. The outer strands have polygonal cross-sections having two straight lines and one curved side (col. 5, I. 26- col. 6, I. 68). Cables having no central strand are also possible. In this case the side surfaces (16) of the sheath (20) (see Fig 3) "may converge to a point (col. 3, I. 34-40). In one form of the cable (col. 5, I. 34-45) each strand is made up of a plurality of filaments "of an organic polyamide". However other filament materials can be used as well, such as e.g. steel wires (col. 7, I. 19-29).

The cables of D1 are used as traction cables, e.g. with pulleys (col. 4, I.23).

The subject-matter of claim 1 is distinguished from D1 in that it refers to electric/communication cables having a cross section according to Fig 1.

3. Inventive step (Art. 33 (3) PCT)

None of the prior art documents available from the Search Report disclose or allude to the claimed cable structure. Hence, an inventive step may be acknowledged.

CLAIMS

- 1. Metallic conductor for electric and/or communication cable that comprises collected assembly of wires (22); characterized in that conductor (21) assumes predetermined polygonal cross-section comprising one curved side.
- 5 2. Conductor according to Claim 1, in which the polygonal cross-section h comprising at least one straight side.
 - 3. Conductor according to Claim 1, in which the polygonal cross-section has least one curved side.
- 4. C 3. Conductor according to any one of Claims 2 to 3, in which the polygor cross-section has comprising a combination of at least one straight side and o curved side.
 - 5. 4. Conductor according to Claim 4-3, in which the polygonal cross-section a circular sector.
- 5. Conductor according to any one of the preceding claims, in which t diameter of each wire (22) is less than or equal to 0.61 mm.
 - 7. 6. Conductor according to any one of the preceding claims, in which t conductor (21) is surrounded by a layer of an insulating material.
- 8. 7. Conductor according to Claim 7 6, in which the layer of insulation material is thermoplastic and/or thermosetting, such as polyethylene, polyest fluorinated polymer, polyolefin, polyamide, polyimide, polyurethane, polyvin chloride, thermoplastic elastomer, ethylene-propylene, polychloroprene or silico rubber, as well as their compounds and derivatives.
- 9. 8. Electric and/or communication cable that comprises a plurality conductors (21) according to claim 1, electrically insulated from one another, and their turn grouped together by a cabling process under a covering or a communication binding element, characterized in that the conductors (21) assume a predetermine polygonal arrangement comprising a curved side.
 - 10. 9. Cable according to Claim 9 8, in which the predetermined polygon arrangement includes at least one straight side.
- 30 11. Cable according to Claim 9, in which the predetermined polygon

EPO - DG 1

6

26 01. 2005

arrangement includes at least one curved side.

- 12. 10. Cable according to any one of Claims 10-to 11 9, in which the predetermined polygonal arrangement includes a combination of at least one straig side and one curved side.
- 5 13. 11. Cable according to Claim 9 8, in which the predetermined polygon arrangement is a circle.
 - 14. 12. Cable according to Claim 9 8, in which the predetermined polygon arrangement is a rectangle.
- 15. 13. Cable according to any one of Claims 13 to 14 11 to 12, in which the cable (23) comprises conductors (21) of different polygonal cross-sections.
 - 16. 14. Cable according to Claim 9 8, in which the predetermined polygon arrangement is surrounded by at least one layer of a protective material.
 - 17. 15. Cable according to Claim 16 14, in which the layer of protective materi is a metallic protective material.
- 15 18. 16. Cable according to Claim 16 15, in which the layer of protective materi is a thermoplastic and/or thermosetting polymeric protective material.
 - 19. 17. Cable according to Claim 16 14, in which the layer of protective materi is a textile material applied in the form of a protective belt.
- 20. 18. Cable according to any one of the Claims 17 to 19 15 to 17, in which the predetermined polygonal arrangement is surrounded by a combination of layers of protective material.
 - 21. 19. Method of manufacture of a metallic conductor (21) according to Claim characterized in that the method comprises at least the stages of:
- Deformation, using a mechanical means of deformation, of a metallic conductor (21) that comprises an assembly of round metallic wires (22) for achieving the predetermined polygonal cross-section, and
 - Extrusion, using an extrusion means, of the metallic conductor (21) obtains in the preceding operation.
